

FORENSIC AUTHENTICATION REPORT

Generated: 2026-02-22 12:20:02

Authentication Results

Metric	Value
Status	Very high tampering indicators detected
Tampering Score	0.9145
Confidence Level	82.9%
Detection Time	2026-02-22 12:20:02

Forensic Analysis

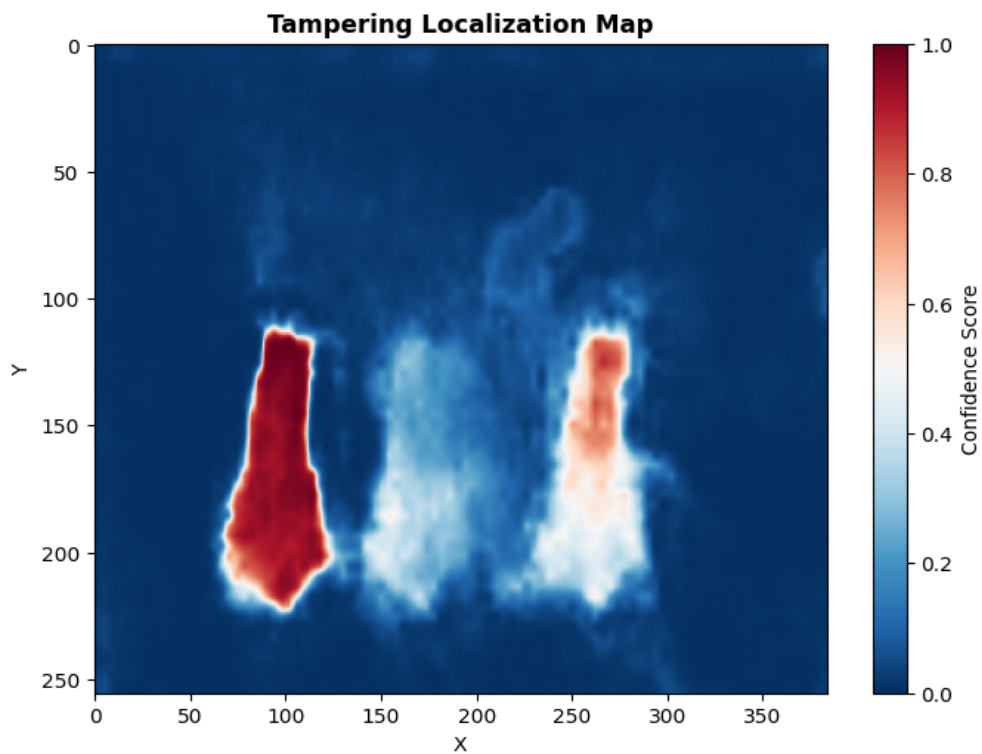

Very low confidence in authenticity. Strong evidence of tampering detected. Image highly likely to be forged.

Original Image

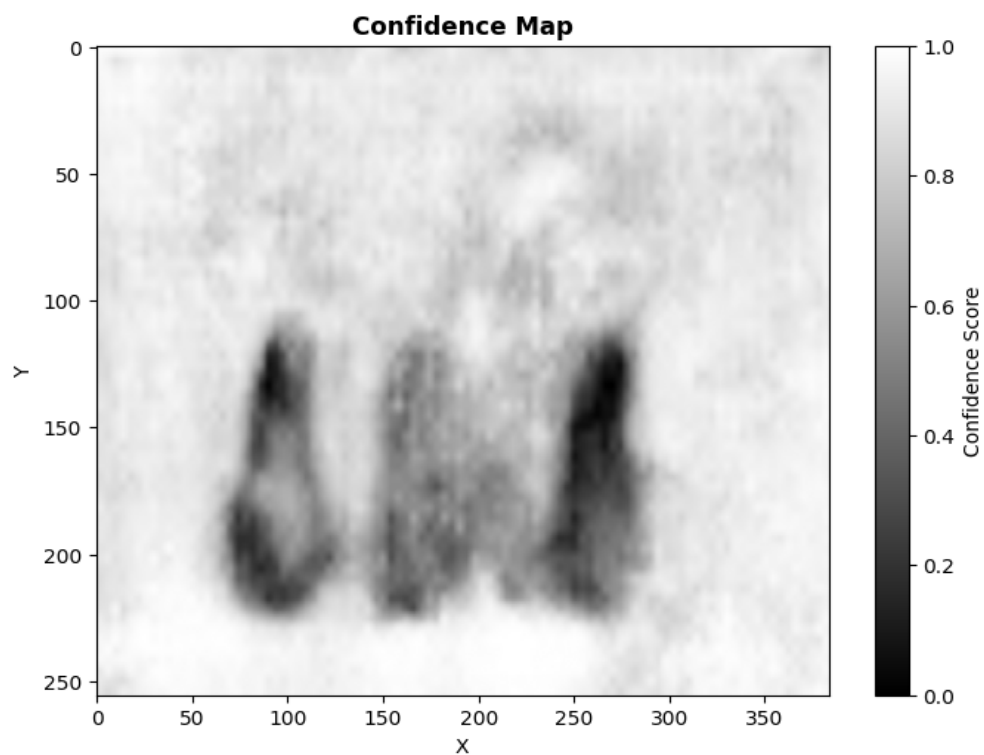

Tampering Localization Map

Red areas indicate detected tampering, blue areas indicate authentic regions.

Confidence Map

Darker areas indicate higher confidence in the tampering detection.

Technical Details

Detection Map Shape: (256, 384)

Image Size: (256, 384)

Confidence Map Available: Yes

Report Generation Time: 2026-02-22 12:20:03

Image Analysis Summary

Detection Overview:

This image shows **very high** levels of tampering indicators with **very high** confidence.

Analysis Details:

The image exhibits very strong evidence of tampering. Multiple analysis techniques have detected substantial anomalies that are highly inconsistent with authentic image formation. Professional authentication review is strongly recommended.

Numerical Summary:

- Tampering Score: 0.9145 (91.5% weighted towards tampering)
- Authenticity Confidence: 8.5%
- Detection Map Coverage: The localization map above shows spatial distribution of detected anomalies, with warmer colors indicating higher tampering confidence.
- Confidence Map: The confidence visualization indicates the model's certainty in each pixel-level prediction.

Tampering Score Scale Reference

Score Range Interpretation:

- 0.0 - 0.2:** Minimal tampering indicators detected
- 0.2 - 0.4:** Low tampering indicators detected
- 0.4 - 0.6:** Moderate tampering indicators detected
- 0.6 - 0.8:** High tampering indicators detected
- 0.8 - 1.0:** Very high tampering indicators detected

Current Image Score: 0.9145 (scales from 0 = authentic to 1 = tampered)
