

FORENSIC AUTHENTICATION REPORT

Generated: 2026-02-22 12:59:35

Authentication Results

Metric	Value
Status	Moderate tampering indicators detected
Tampering Score	0.5401
Confidence Level	8.0%
Detection Time	2026-02-22 12:59:35

Forensic Analysis

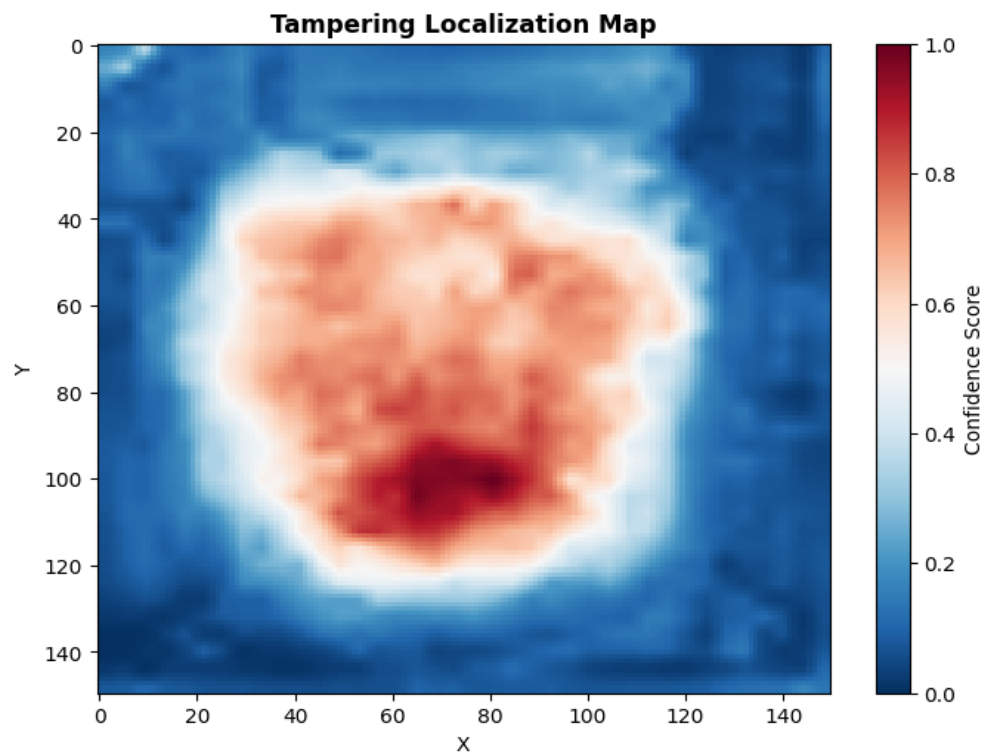

Moderate confidence. The image shows some suspicious indicators but evidence is inconclusive. Further analysis recommended.

Original Image

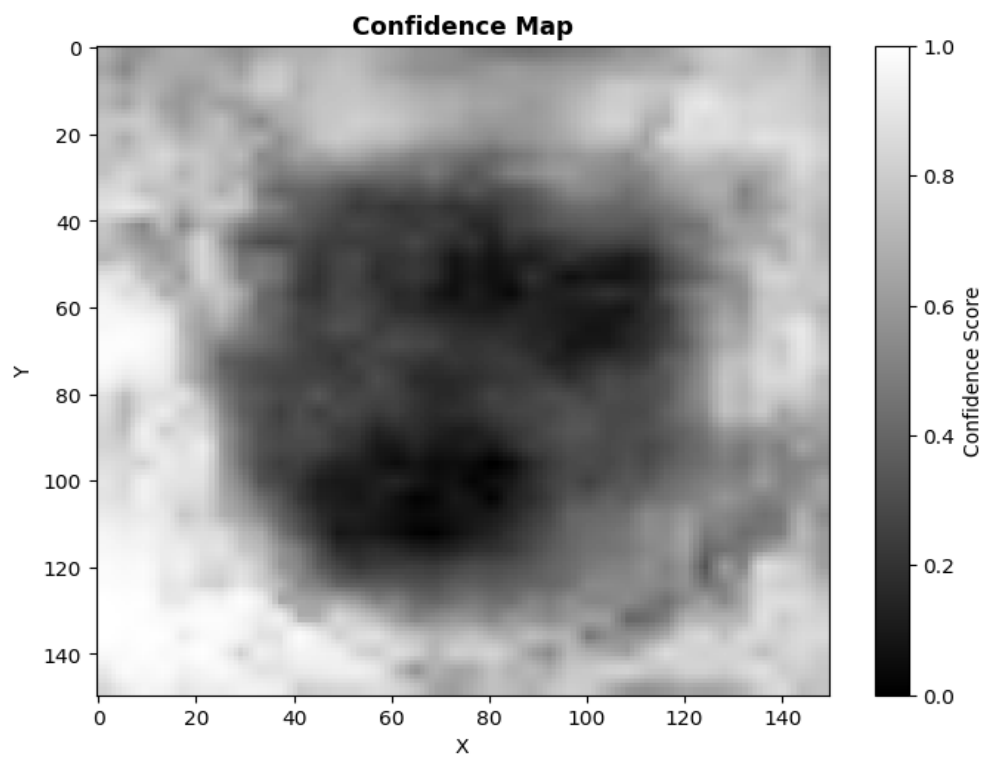

Tampering Localization Map

Red areas indicate detected tampering, blue areas indicate authentic regions.

Confidence Map

Darker areas indicate higher confidence in the tampering detection.

Technical Details

Detection Map Shape: (150, 150)

Image Size: (150, 150)

Confidence Map Available: Yes

Report Generation Time: 2026-02-22 12:59:36

Image Analysis Summary

Detection Overview:

This image shows **moderate** levels of tampering indicators with **moderate** confidence.

Analysis Details:

The image shows moderate levels of tampering indicators. Some regions exhibit properties inconsistent with natural image formation, suggesting possible manipulation or splicing. Further forensic analysis may be warranted.

Numerical Summary:

- Tampering Score: 0.5401 (54.0% weighted towards tampering)
- Authenticity Confidence: 46.0%
- Detection Map Coverage: The localization map above shows spatial distribution of detected anomalies, with warmer colors indicating higher tampering confidence.
- Confidence Map: The confidence visualization indicates the model's certainty in each pixel-level prediction.

Tampering Score Scale Reference

Score Range Interpretation:

- 0.0 - 0.2:** Minimal tampering indicators detected
- 0.2 - 0.4:** Low tampering indicators detected
- 0.4 - 0.6:** Moderate tampering indicators detected
- 0.6 - 0.8:** High tampering indicators detected
- 0.8 - 1.0:** Very high tampering indicators detected

Current Image Score: 0.5401 (scales from 0 = authentic to 1 = tampered)
